RE: Barry Barrett

POC 719279

DOB: 11/18/52

At your request, I have reviewed the occupational history, exposure and medical history as provided to me and a B-reading of a chest x-ray dated 07/21/01 on Mr. Barrett.

His work history reveals an occupational exposure to asbestos containing products while he was working as a seaman while serving in the U. S. Navy- USS L. Mendel Rivers in Newport, VA from 1972-1976, and as a electrician while working for E & D Electric at various residential sites in Jackson, MS in 1976. My B-reading of the chest x-ray dated 07/21/01 reveals bilateral interstitial fibrosis consistent with asbestosis.

On the basis of this individual's history of occupational exposure to asbestos and my reading of his chest x-ray, I feel within a reasonable degree of medical certainty, Barry Barrett has asbestosis.

Sincerely,

Ray A. Harron, M.D.

RE: Barry Barrett

DOB: 11-18-52

At your request, I have reviewed the occupational history, exposure and medical history as provided to me and a B-reading of a chest x-ray dated 07-21-01 on Mr. Barrett.

The work history reveals an occupational exposure to silica while Mr. Barrett was working as an electrician at E&D Electric and while serving in the Navy from 1974-1991. My B-reading of the chest x-ray dated 07-21-01, reveals bilateral interstitial fibrosis consistent with silicosis.

On the basis of this individual's history of occupational exposure to silica and my reading of his chest x-ray, I feel within a reasonable degree of medical certainty, Barry Barrett has silicosis.

Since silica exposure is associated with an increased incident of cor pulmonale, progressive pulmonary fibrosis, spontaneous pneumothorax, autoimmune connective tissue diseases such as scleroderma, rheumatoid arthritis, systemic lupus erythematosus and others, tuberculosis, renal complications and lung cancer, this person should be examined frequently by a physician for possible early detection and treatment of these processes.

Sincerely,

Ray A. Harron, M.D.
